Combinatorial Search: From Algorithms to Systems Youssef Hamadi

Although they are believed to be unsolvable in general, tractability results suggest that some practical NP-hard problems can be efficiently solved. Combinatorial search algorithms are designed to efficiently explore the usually large solution space of these instances by reducing the search space to feasible regions and using heuristics to efficiently explore these regions. Various mathematical formalisms may be used to express and tackle combinatorial problems, among them the constraint satisfaction problem (CSP) and the propositional satisfiability problem (SAT). These algorithms, or constraint solvers, apply search space reduction through inference techniques, use activity-based heuristics to guide exploration, diversify the searches through frequent restarts, and often learn from their mistakes.

In this book the author focuses on knowledge sharing in combinatorial search, the capacity to generate and exploit meaningful information, such as redundant constraints, heuristic hints, and performance measures, during search, which can dramatically improve the performance of a constraint solver. Information can be shared between multiple constraint solvers simultaneously working on the same instance, or information can help achieve good performance while solving a large set of related instances. In the first case, information sharing has to be performed at the expense of the underlying search effort, since a solver has to stop its main effort to prepare and commu

nicate the information to other solvers; on the other hand, not sharing information can incur a cost for the whole system, with solvers potentially exploring unfeasible spaces discovered by other solvers. In the second case, sharing performance measures can be done with little overhead, and the goal is to be able to tune a constraint solver in relation to the characteristics of a new instance – this corresponds to the selection of the most suitable algorithm for solving a given instance.

The book is suitable for researchers, practitioners, and graduate students working in the areas of optimization, search, constraints, and computational complexity.

From reader reviews:

Johnny Allen:

What do you concentrate on book? It is just for students as they are still students or that for all people in the world, the actual best subject for that? Simply you can be answered for that problem above. Every person has various personality and hobby for every other. Don't to be pushed someone or something that they don't desire do that. You must know how great as well as important the book Combinatorial Search: From Algorithms to Systems. All type of book is it possible to see on many resources. You can look for the internet options or other social media.

Phyllis Callahan:

Information is provisions for those to get better life, information presently can get by anyone from everywhere. The information can be a know-how or any news even a problem. What people must be consider any time those information which is in the former life are challenging to be find than now's taking seriously which one works to believe or which one the actual resource are convinced. If you receive the unstable resource then you obtain it as your main information you will have huge disadvantage for you. All those possibilities will not happen within you if you take Combinatorial Search: From Algorithms to Systems as your daily resource information.

Charlie Attwood:

Reading a reserve tends to be new life style in this particular era globalization. With looking at you can get a lot of information which will give you benefit in your life. With book everyone in this world can certainly share their idea. Guides can also inspire a lot of people. A lot of author can inspire all their reader with their story or perhaps their experience. Not only the storyplot that share in the textbooks. But also they write about the ability about something that you need example of this. How to get the good score toefl, or how to teach your children, there are many kinds of book which exist now. The authors in this world always try to improve their ability in writing, they also doing some investigation before they write to the book. One of them is this Combinatorial Search: From Algorithms to Systems.

Chris McCree:

You may get this Combinatorial Search: From Algorithms to Systems by check out the bookstore or Mall. Only viewing or reviewing it might to be your solve trouble if you get difficulties for your knowledge. Kinds of this book are various. Not only through written or printed but can you enjoy this book by means of e-book. In the modern era including now, you just looking by your mobile phone and searching what their problem. Right now, choose your own ways to get more information about your guide. It is most important to arrange you to ultimately make your knowledge are still change. Let's try to choose correct ways for you.
