## Colorants for Non-Textile Applications

This volume examines the chemistry of natural and synthetic dyes produced for non-textile markets, where much new basic research in color chemistry is now taking place.

The first group of chapters covers the design, synthesis, properties and application technology pertaining to dyes for digital printing and photography. The reader will be pleased with the breadth and depth of information presented in each case. Of particular interest is the discussion of strategies for the design of dyes in these categories, with emphasis on enhancing technical properties. In view of certain new developments, the ink-jet chapter includes results from studies pertaining to dyes for textiles.

The three chapters comprising Section II of this volume cover the broad subject of dyes for food, drug and cosmetic applications and then provide an in-depth look at dyes for biomedical applications and molecular recognition. The chapter on dyes for molecular recognition places emphasis on applications in the biological sciences, including sensory materials and artificial receptors. While the former two topics have been covered elsewhere in the past, the present chapters are unequalled in scope.

Section III provides an in-depth review of the design of laser dyes and dye-based functional materials. In the first of the two chapters, the major principles of laser operation are summarized. This is followed by a discussion of spectroscopic properties, such as activation and deactivation of absorbed light by laser dyes.

Approaches to the development of new laser dyes are presented. The second chapter pertains to the synthesis of dicyanopyrazine-based multifunctional dyes. The visible and fluorescence spectra of these dyes in solution and the solid state are correlated with their three-dimensional molecular structures. Molecular stacking behavior and solid state properties of these "multifunctional" dye materials are presented.

The final group of chapters pertains to natural dyes and dyes for natural substrates. In recent years, the impression among certain consumers that "natural" is better/safer has generated much interest in the use of natural dyes rather than synthetics. This has led to a few short discussion papers in which the environmental advantages to using natural dyes have been questioned. The initial chapter in this group provides both a historical look at natural dyes and a comprehensive compilation of natural dye structures and their sources. Though natural dyes are of interest as colorants for textiles, selected ones are used primarily in food and cosmetics.

Chapter ten provides an update on the author's previous reviews of structure-color-relationships among precursors employed in the coloration of hair. Chemical constitutions characterizing hair dye structures are presented, along with a summary of available precursors and their environmental properties. Similarly, the chapter on leather dyes covers constitutions and nomenclature, in addition to providing interesting perspectives on the origin and use of leather, the dyeing of leather, and key environmental issues.

This volume is concluded with another look at colors in nature. In this case, rather than revisiting colors in plant life, an interesting chapter dealing with color in the *absence of colorants* is presented. Chapter twelve covers basic concepts of color science and illustrates how 3-D assemblies leading to a plethora of colors are handled in nature. It is our hope that this atypical "color chemistry" chapter will invoke ideas that lead to the design of useful colorants.

The chapters presented in this volume demonstrate that color chemistry still has much to offer individuals with inquiring minds who are searching for a career path. This work highlights the creativity of today's color chemists and the wide variety of interesting non-textile areas from which a career can be launched.

### From reader reviews:

#### **Shelia Coggins:**

A lot of people always spent their particular free time to vacation or even go to the outside with them family members or their friend. Do you realize? Many a lot of people spent these people free time just watching TV, as well as playing video games all day long. If you want to try to find a new activity that's look different you can read some sort of book. It is really fun for yourself. If you enjoy the book you read you can spent all day every day to reading a e-book. The book Colorants for Non-Textile Applications it doesn't matter what good to read. There are a lot of individuals who recommended this book. We were holding enjoying reading this book. Should you did not have enough space to deliver this book you can buy the actual e-book. You can m0ore simply read this book from the smart phone. The price is not to cover but this book has high quality.

#### **David Marx:**

The reason? Because this Colorants for Non-Textile Applications is an unordinary book that the inside of the e-book waiting for you to snap that but latter it will surprise you with the secret it inside. Reading this book next to it was fantastic author who else write the book in such wonderful way makes the content on the inside easier to understand, entertaining method but still convey the meaning completely. So , it is good for you because of not hesitating having this any longer or you going to regret it. This unique book will give you a lot of advantages than the other book possess such as help improving your talent and your critical thinking approach. So , still want to postpone having that book? If I were you I will go to the reserve store hurriedly.

#### **Anna Raynor:**

Are you kind of busy person, only have 10 or perhaps 15 minute in your time to upgrading your mind expertise or thinking skill actually analytical thinking? Then you are receiving problem with the book when compared with can satisfy your short period of time to read it because pretty much everything time you only find publication that need more time to be learn. Colorants for Non-Textile Applications can be your answer as it can be read by you who have those short extra time problems.

#### **Richard Plummer:**

In this time globalization it is important to someone to get information. The information will make you to definitely understand the condition of the world. The health of the world makes the information quicker to share. You can find a lot of sources to get information example: internet, classifieds, book, and soon. You will see that now, a lot of publisher this print many kinds of book. Typically the book that recommended to your account is Colorants for Non-Textile Applications this publication consist a lot of the information on the condition of this world now. That book was represented so why is the world has grown up. The terminology styles that writer use to explain it is easy to understand. The particular writer made some investigation when he makes this book. Honestly, that is why this book suitable all of you.
