Software Testing in the Cloud: Migration and Execution (SpringerBriefs in Computer Science)

Scott Tilley, Tauhida Parveen

Software Testing in the Cloud: Migration and Execution (SpringerBriefs in Computer Science) Scott Tilley, Tauhida Parveen

For a large, complex system, the amount of test cases in a regression test suite can range from a few hundred to several thousands, which can take hours or even days to execute. Regression testing also requires considerable resources that are often not readily available. This precludes their use in an interactive setting, further contributing to an inefficient testing process.

Cloud computing offers the use of virtualized hardware, effectively unlimited storage, and software services that can help reduce the execution time of large test suites in a cost-effective manner. The research presented by Tilley and Parveen leverages the resources provided by cloud computing infrastructure to facilitate the concurrent execution of test cases. They introduce a decision framework called SMART-T to support migration of software testing to the cloud, a distributed environment called HadoopUnit for the concurrent execution of test cases in the cloud, and a series of case studies illustrating the use of the framework and the environment. Experimental results indicate a significant reduction in test execution time is possible when compared with a typical sequential environment.

Software testing in the cloud is a subject of high interest for advanced practitioners and academic researchers alike. For advanced practitioners, the issue of cloud computing and its impact on the field of software testing is becoming increasingly relevant. For academic researchers, this is a subject that is replete with interesting challenges; there are so many open problems that graduate students will be busy for years to come. To further disseminate results in this field, the authors created a community of interest called “Software Testing in the Cloud” (www.STITC.org), and they encourage all readers to get involved in this exciting new area.

From reader reviews:

Trevor Wright:

This book untitled Software Testing in the Cloud: Migration and Execution (SpringerBriefs in Computer Science) to be one of several books in which best seller in this year, this is because when you read this reserve you can get a lot of benefit upon it. You will easily to buy this book in the book retailer or you can order it by way of online. The publisher of the book sells the e-book too. It makes you quickly to read this book, because you can read this book in your Smart phone. So there is no reason for your requirements to past this e-book from your list.

Margaret Honig:

Are you kind of occupied person, only have 10 or even 15 minute in your morning to upgrading your mind expertise or thinking skill also analytical thinking? Then you are having problem with the book as compared to can satisfy your small amount of time to read it because this all time you only find e-book that need more time to be read. Software Testing in the Cloud: Migration and Execution (SpringerBriefs in Computer Science) can be your answer given it can be read by anyone who have those short time problems.

Rubin Bourne:

What is your hobby? Have you heard that question when you got scholars? We believe that that problem was given by teacher on their students. Many kinds of hobby, Every person has different hobby. Therefore you know that little person just like reading or as reading become their hobby. You have to know that reading is very important along with book as to be the factor. Book is important thing to provide you knowledge, except your personal teacher or lecturer. You discover good news or update in relation to something by book. A substantial number of sorts of books that can you choose to adopt be your object. One of them is actually Software Testing in the Cloud: Migration and Execution (SpringerBriefs in Computer Science).

Harold Thompson:

Reading a book make you to get more knowledge from it. You can take knowledge and information from the book. Book is published or printed or created from each source that filled update of news. In this particular modern era like at this point, many ways to get information are available for an individual. From media social including newspaper, magazines, science reserve, encyclopedia, reference book, fresh and comic. You can add your knowledge by that book. Ready to spend your spare time to spread out your book? Or just looking for the Software Testing in the Cloud: Migration and Execution (SpringerBriefs in Computer Science) when you needed it?
