Signals and Systems: A Primer with MATLAB® provides clear, interesting, and easy-to-understand coverage of continuous-time and discrete-time signals and systems. Each chapter opens with a historical profile or career talk, followed by an introduction that states the chapter objectives and links the chapter to the previous ones. All principles are presented in a lucid, logical, step-by-step approach. As much as possible, the authors avoid wordiness and detail overload that could hide concepts and impede understanding.

In recognition of the requirements by the Accreditation Board for Engineering and Technology (ABET) on integrating computer tools, the use of MATLAB® is encouraged in a student-friendly manner. MATLAB is introduced in Appendix B and applied gradually throughout the book.

Each illustrative example is immediately followed by a practice problem along with its answer. Students can follow the example step by step to solve the practice problem without flipping pages or looking at the end of the book for answers. These practice problems test students' comprehension and reinforce key concepts before moving on to the next section.

Toward the end of each chapter, the authors discuss some application aspects of the concepts covered in the chapter. The material covered in the chapter is applied to at least one or two practical problems or devices. This helps students see how the concepts are applied to real-life situations.

In addition, thoroughly worked examples are given liberally at the end of every section. These examples give students a solid grasp of the solutions as well as the confidence to solve similar problems themselves. Some of the problems are solved in two or three ways to facilitate a deeper understanding and comparison of different approaches.

Ten review questions in the form of multiple-choice objective items are provided at the end of each chapter with answers. The review questions are intended to cover the "little tricks" that the examples and end-of-chapter problems may not cover. They serve as a self-test device and help students determine chapter mastery. Each chapter also ends with a summary of key points and formulas.

Designed for a three-hour semester course on signals and systems, **Signals and Systems: A Primer with MATLAB**® is intended as a textbook for junior-level undergraduate students in electrical and computer

engineering. The prerequisites for a course based on this book are knowledge of standard mathematics (including calculus and differential equations) and electric circuit analysis.

From reader reviews:

Seth Sawyer:

This Signals and Systems: A Primer with MATLAB® usually are reliable for you who want to be described as a successful person, why. The explanation of this Signals and Systems: A Primer with MATLAB® can be one of many great books you must have is actually giving you more than just simple reading food but feed anyone with information that maybe will shock your before knowledge. This book is handy, you can bring it almost everywhere and whenever your conditions throughout the e-book and printed versions. Beside that this Signals and Systems: A Primer with MATLAB® forcing you to have an enormous of experience for instance rich vocabulary, giving you demo of critical thinking that we all know it useful in your day pastime. So , let's have it appreciate reading.

John Vandorn:

The reserve with title Signals and Systems: A Primer with MATLAB® includes a lot of information that you can discover it. You can get a lot of help after read this book. This book exist new understanding the information that exist in this book represented the condition of the world currently. That is important to yo7u to know how the improvement of the world. This specific book will bring you throughout new era of the glowbal growth. You can read the e-book in your smart phone, so you can read that anywhere you want.

Micheal Mata:

The particular book Signals and Systems: A Primer with MATLAB® has a lot of knowledge on it. So when you check out this book you can get a lot of gain. The book was authored by the very famous author. Mcdougal makes some research prior to write this book. This kind of book very easy to read you can find the point easily after perusing this book.

David Ruby:

What is your hobby? Have you heard that will question when you got learners? We believe that that issue was given by teacher to the students. Many kinds of hobby, Everyone has different hobby. So you know that little person just like reading or as reading become their hobby. You need to understand that reading is very important as well as book as to be the point. Book is important thing to increase you knowledge, except your own personal teacher or lecturer. You will find good news or update regarding something by book. Different categories of books that can you take to be your object. One of them is actually Signals and Systems: A Primer with MATLAB®.
