Xavier Domènech Antúnez

Fundamentos de química ambiental. Volumen II (Ciencias Químicas) (Spanish Edition) Xavier Domènech Antúnez

Esta obra aborda los fundamentos de la química ambiental, que abarca el comportamiento de los contaminantes en el medio ambiente, incluyendo todos los aspectos de su ciclo de vida, desde las fuentes que los generan, los procesos de transporte, las reacciones químicas, su reparto entre los distintos compartimentos o fases, así como los efectos producidos en los organismos, materiales y otros medios. El presente volumen analiza el comportamiento de los contaminantes en el medio ambiente, la evaluación del riesgo ambiental de la presencia de estos contaminantes en los diferentes compartimentos y las técnicas de prevención de la contaminación y de rehabilitación de sistemas contaminados.

El texto va dirigido a alumnos de ciencias ambientales y química, pero también es útil en general para estudiantes de otros grados de ciencias, biociencias e ingenierías interesados en la temática de la contaminación ambiental, y que hayan seguido un curso universitario de química general.
