**Neuropsychologie de la maladie de Parkinson et des syndromes apparentés (French Edition)** Kathy Dujardin, Luc Defebvre

La maladie de Parkinson est une affection neurodégénérative fréquente, touchant 1 à 2 % des plus de 50 ans. Même si ce sont principalement les troubles moteurs qui amènent le patient à consulter, les troubles cognitifs et psycho-comportementaux font aujourd'hui l'objet d'une évaluation quasi systématique.

Après un rappel des bases de la physiologie des ganglions de la base, cette deuxième édition rend compte des principaux troubles cognitifs et psycho-comportementaux qui accompagnent les pathologies des noyaux gris centraux : maladie de Parkinson, atrophie multisystématisée, paralysie supranucléaire progressive, dégénérescence cortico-basale, démence à corps de Lewy et maladie de Huntington.

Didactique et pratique, cet ouvrage est illustré des tests les plus utilisés dans l'évaluation des dysfonctionnements cognitifs associés aux différents syndromes abordés.

Didactique et pratique, cette seconde édition rend compte des troubles moteurs, cognitifs et psycho-comportementaux de la maladie de Parkinson. Il est illustré des tests les plus utilisés dans l'évaluation des dysfonctionnements cognitifs.
