Techniques for Image Processing and Classifications in Remote Sensing Robert A. Schowengerdt Techniques for Image Processing and Classifications in Remote Sensing provides an introduction to the fundamentals of computer image processing and classification (commonly called ""pattern recognition"" in other applications). The book begins with a discussion of digital scanners and imagery, and two key mathematical concepts for image processing and classification-spatial filtering and statistical pattern recognition. This is followed by separate chapters on image processing and classification techniques that are widely used in the remote sensing community. The emphasis throughout is on techniques that assist in the analysis of images, not particular applications of these techniques. The book also has four appendixes, featuring a bibliography; an introduction to computer binary data representation and image data formats; a discussion of interactive image processing; and a selection of exam questions from the Image Processing Laboratory course at the University of Arizona.
This book is intended for use as either a primary source in an introductory image processing course or as a supplementary text in an intermediate-level remote sensing course. The academic level addressed is upper-division undergraduate or beginning graduate, and familiarity with calculus and basic vector and matrix concepts is assumed.

From reader reviews:

Karla Whisenant:

The book Techniques for Image Processing and Classifications in Remote Sensing can give more knowledge and information about everything you want. Why must we leave a very important thing like a book Techniques for Image Processing and Classifications in Remote Sensing? Several of you have a different opinion about publication. But one aim that will book can give many details for us. It is absolutely proper. Right now, try to closer with your book. Knowledge or data that you take for that, you could give for each other; you could share all of these. Book Techniques for Image Processing and Classifications in Remote Sensing has simple shape nevertheless, you know: it has great and big function for you. You can appear the enormous world by open up and read a book. So it is very wonderful.

Sara Burns:

This book untitled Techniques for Image Processing and Classifications in Remote Sensing to be one of several books in which best seller in this year, honestly, that is because when you read this guide you can get a lot of benefit into it. You will easily to buy this particular book in the book retail outlet or you can order it via online. The publisher of the book sells the e-book too. Then we question again, what kind of activity are you experiencing when the spare time coming to you of course your answer will probably unlimited right. Then do you ever try this one, reading textbooks. It can be your alternative within spending your spare time, typically the book you have read is definitely Techniques for Image Processing and Classifications in Remote Sensing.

Paul England:

Within this era which is the greater particular person or who has ability to do something more are more special than other. Do you want to become certainly one of it? It is just simple solution to have that. What you must do is just spending your time not very much but quite enough to possess a look at some books. One of several books in the top listing in your reading list is actually Techniques for Image Processing and Classifications in Remote Sensing. This book that is qualified as The Hungry Mountains can get you closer in becoming precious person. By looking up and review this e-book you can get many advantages.
