Securing Systems: Applied Security Architecture and Threat Models Brook S. E. Schoenfield

Internet attack on computer systems is pervasive. It can take from less than a minute to as much as eight hours for an unprotected machine connected to the Internet to be completely compromised. It is the information security architect's job to prevent attacks by securing computer systems. This book describes both the process and the practice of assessing a computer system's existing information security posture. Detailing the time-tested practices of experienced security architects, it explains how to deliver the right security at the right time in the implementation lifecycle.

Securing Systems: Applied Security Architecture and Threat Models covers all types of systems, from the simplest applications to complex, enterprise-grade, hybrid cloud architectures. It describes the many factors and prerequisite information that can influence an assessment. The book covers the following key aspects of security analysis:

- When should the security architect begin the analysis?
- At what points can a security architect add the most value?
- What are the activities the architect must execute?
- How are these activities delivered?
- What is the set of knowledge domains applied to the analysis?
- What are the outputs?
- What are the tips and tricks that make security architecture risk assessment easier?

To help you build skill in assessing architectures for security, the book presents six sample assessments. Each assessment examines a different type of system architecture and introduces at least one new pattern for security analysis. The goal is that after you've seen a sufficient diversity of architectures, you'll be able to understand varied architectures and can better see the attack surfaces and prescribe security solutions.

From reader reviews:

Jacquelyn Lopez:

What do you consider book? It is just for students because they are still students or the idea for all people in the world, the particular best subject for that? Only you can be answered for that concern above. Every person has several personality and hobby for each and every other. Don't to be pushed someone or something that they don't desire do that. You must know how great and also important the book Securing Systems: Applied Security Architecture and Threat Models. All type of book would you see on many solutions. You can look for the internet options or other social media.

Robert Mundo:

The particular book Securing Systems: Applied Security Architecture and Threat Models has a lot info on it. So when you check out this book you can get a lot of profit. The book was published by the very famous author. This articles author makes some research ahead of write this book. This particular book very easy to read you can obtain the point easily after looking over this book.

Marni Elliott:

Beside this kind of Securing Systems: Applied Security Architecture and Threat Models in your phone, it might give you a way to get more close to the new knowledge or details. The information and the knowledge you can got here is fresh from your oven so don't be worry if you feel like an previous people live in narrow small town. It is good thing to have Securing Systems: Applied Security Architecture and Threat Models because this book offers for your requirements readable information. Do you often have book but you would not get what it's facts concerning. Oh come on, that will not happen if you have this in your hand. The Enjoyable set up here cannot be questionable, like treasuring beautiful island. Use you still want to miss the item? Find this book along with read it from currently!

Thomas Heiden:

This Securing Systems: Applied Security Architecture and Threat Models is completely new way for you who has interest to look for some information because it relief your hunger info. Getting deeper you upon it getting knowledge more you know or you who still having bit of digest in reading this Securing Systems: Applied Security Architecture and Threat Models can be the light food for you because the information inside that book is easy to get by means of anyone. These books build itself in the form that is reachable by anyone, that's why I mean in the e-book contact form. People who think that in book form make them feel tired even dizzy this book is the answer. So there isn't any in reading a book especially this one. You can find what you are looking for. It should be here for an individual. So , don't miss this! Just read this e-book sort for your better life and also knowledge.
