Chaos Applications in Telecommunications

Chaos Applications in Telecommunications

The concept of transmitting information from one chaotic system to another derives from the observation of the synchronization of two chaotic systems. Having developed two chaotic systems that can be synchronized, scientists can modulate on one phase signal the information to be transmitted, and subtract (demodulate) the information from the corresponding phase signal of the coupled chaotic system.

Chaos Applications in Telecommunications demonstrates this technique in various applications of communication systems. This book details methods of transmitting information at much higher levels of security than what is available by current techniques. Following a detailed introduction, the book demonstrates how chaotic signals are generated and transmitted. It then details the design of chaotic transmitters and receivers, and describes chaos-based modulation and demodulation techniques. The text describes how a chaos-based spreading sequence outperforms classical pseudorandom sequences in selective and nonselective channels. It also develops channel equalization techniques designed for chaotic communications systems by applying knowledge of systems dynamics, linear time-invariant representations of chaotic systems, and symbolic dynamics representations of chaotic systems. The final chapter explains a specific application for optical communications.

This volume provides the essential information for those who want an integrated view of how an established concept such as chaos can open new roads in the communications and security fields.

From reader reviews:

Norman Williams:

Book will be written, printed, or created for everything. You can understand everything you want by a book. Book has a different type. We all know that that book is important matter to bring us around the world. Beside that you can your reading ability was fluently. A publication Chaos Applications in Telecommunications will make you to possibly be smarter. You can feel far more confidence if you can know about everything. But some of you think that will open or reading some sort of book make you bored. It is far from make you fun. Why they could be thought like that? Have you seeking best book or ideal book with you?

Marie Avis:

Book is to be different for every grade. Book for children until adult are different content. As we know that book is very important for people. The book Chaos Applications in Telecommunications was making you to know about other expertise and of course you can take more information. It is very advantages for you. The reserve Chaos Applications in Telecommunications is not only giving you considerably more new information but also for being your friend when you feel bored. You can spend your current spend time to read your publication. Try to make relationship together with the book Chaos Applications in Telecommunications. You never experience lose out for everything should you read some books.

Charlotte Gambrel:

As people who live in often the modest era should be update about what going on or info even knowledge to make all of them keep up with the era that is always change and advance. Some of you maybe will probably update themselves by reading books. It is a good choice for you personally but the problems coming to you actually is you don't know what kind you should start with. This Chaos Applications in Telecommunications is our recommendation so you keep up with the world. Why, since this book serves what you want and want in this era.

Roosevelt Alday:

As a pupil exactly feel bored in order to reading. If their teacher requested them to go to the library or even make summary for some reserve, they are complained. Just minor students that has reading's internal or real their interest. They just do what the trainer want, like asked to go to the library. They go to right now there but nothing reading significantly. Any students feel that reading through is not important, boring as well as can't see colorful photographs on there. Yeah, it is to become complicated. Book is very important for you. As we know that on this age, many ways to get whatever you want. Likewise word says, many ways to reach Chinese's country. So , this Chaos Applications in Telecommunications can make you experience more interested to read.
