Franklin Hernández Castro

El libro comienza con una revisión crítica de las diferentes herramientas de proporción que se usaron durante la historia del diseño, el arte y la arquitectura occidental. Más tarde hace un recorrido por los métodos de proporción desde el punto de vista matemático y en la naturaleza, ofreciendo un recuento de los sistemas de proporción más usados en las estructuras naturales, se analizan con detalle los crecimientos espirales, los meandros y las ramificaciones entre otros. En la tercera parte del libro se hace un análisis lógico de la utilidad de los métodos de proporción en el diseño y los posibles errores que se han cometido desde tiempos de los romanos hasta nuestros días, al asumir estos sistemas como el tipo de herramientas que hemos considerado que son. Finalmente el libro ofrece un rico recuento de los posibles métodos futuros en materia de diseño, en los que herramientas digitales se funden con las clásicas concepciones de proporción y color para darnos una posible visión del futuro de la metodología del diseño y la arquitectura.
